PROCESSOR CLEANER

For the thorough deep cleaning and removal of all the alkaline residues accumulations in offset plates processors developer bath tanks and conduits.

Properties

- Supplied in concentrated form.
- It is used diluted in water at 1+4 proportion.
- It is an acidic aqueous based product.
- Great descaling and cleaning power.
- Deep cleaning power of all the dirt accumulated in the plates processors' conduits
- Low foaming characteristic, to avoid the excessive use of defoamers.
- It is recommended a good after use rinse before reinstalling the plates' developer in the processor.

How to use

The product is a concentrate, therefore it has to be previously diluted in water before use, at the recommended proportion of: 1 litre of PROCESSOR CLEANER plus 4 litres of Water.

Then, fill the plates processor with the above pre-mixed emulsion and let it recirculate during 20 minutes approximately. After use, wash thoroughly with Water until the complete removal of all the cleaning emulsion residues.
